2005: Surgery center opens in Tampa

Who we are

The story of Laser Spine Institute is one of vision and innovation. The organization was formed through a desire to provide an effective alternative to traditional, open back surgery for people suffering from debilitating neck or back pain. Drs. James St. Louis, Glenn Hamburg and Michael Perry together fostered a plan to formulate the company that would become Laser Spine Institute.

Today, Laser Spine Institute helps more than 750 patients each month find relief from chronic neck or back pain. Since 2005, we have helped more than 60,000 patients on their journey to wellness.

What we do

On average, our patients have suffered from chronic pain for nine years before deciding to have surgery for relief. Most have exhausted conservative treatment methods prior to committing to surgery. Laser Spine Institute's proven medical techniques offer patients the ability to find relief faster than traditional open neck or back surgery.

Advantages of surgery at Laser Spine Institute

- 98% patient recommendation rate
- No lengthy recovery*
- Board-certified surgeons*
- 97% patient satisfaction rate
- Less than a 1-inch incision (small incision for MIS)
- Minimally invasive outpatient procedure

Conditions we treat

- Spinal stenosis
- Bulging/herniated disc
- Sciatica
- Pinched nerve
- Scoliosis
- Other chronic conditions

*Each patient's experience and time of rest may differ. *See LaserSpineInstitute.com/surgeons.
